

## METHOD OF PRODUCING NON-BOVINE CHYMOSIN AND USE HEREOF

## ABSTRACT

- 5 A method of recombinantly producing a non-bovine pre-prochymosin, prochymosin or  
chymosin derived from ruminant species including deer species, buffalo species, antelope  
species, giraffe species, ovine species and caprine species; *Camelidae* species such as  
*Camelus dromedarius*; porcine species; or *Equidae* species. The recombinant enzymes  
are used in milk coagulating compositions in cheese manufacturing based on cow's milk  
10 and milk from any animal species which are used in cheese manufacturing including  
camel's milk.
